

Data Health Check

Gain insight into the data your organization produces

Determine if your tools process data effectively

Understand how data is being leveraged across departments

Reveal value-adding opportunities your data holds

Establish a foundation that unlocks the value your business data holds.

The amount of data produced and consumed will double between 2022 and 2025.* Some organizations are yet to start their journey to extract value from their data while others are already using it to gain competitive advantage and make smarter decisions.

Actionable data is no longer limited to the rows and columns in traditional databases or Excel. It now spans external data sets (e.g., *market intelligence*), outside-in opinions (e.g., *social media sentiment*), SaaS applications, IoT devices (e.g., *temperature sensors*) and audio/video feeds.

Relying on dated on-premises infrastructure to support the growing volume and types of data is holding your business back from having a clear picture of the data your organization produces and maximizing its potential.

With ProArch's 3-day Data Health Check, organizations gain an understanding of their current data maturity and its gaps so that progress can be made in becoming a data-driven organization.

THE 3-DAY DATA HEALTH CHECK INCLUDES:

- Interviews with key technology & business stakeholders
- **Review and assessment of:**
 - data and analytics technology & capabilities
 - methodology for producing data & analytics
 - approach to data governance
- A final report with insights, recommendations, & SWOT analysis
